TROX® TECHNIK
The art of handling air

WASHABLE PANEL

The washable pleated filters are designed for general use in ventilation and air conditioning systems or areas where there is a high dust content.

Made from nonwoven needle punched synthetic media and fixed within a galvanised channel frame with urethane, ensuring no air bypass, this filter conforms to SABS 1428-1987. A test certificate is available on request.

The media is self-supporting or wire-supported depending on customers requirement/preference. The wire-supported filter media is sandwiched between two layers of expanded wire mesh, thus increasing the filters rigidity.
