Description

Filter Holding Frames are used in filter banks to house primary and/or secondary filters.

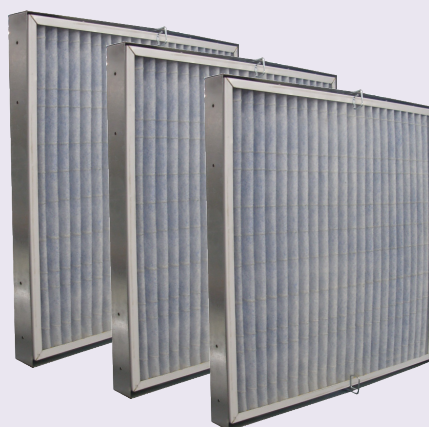

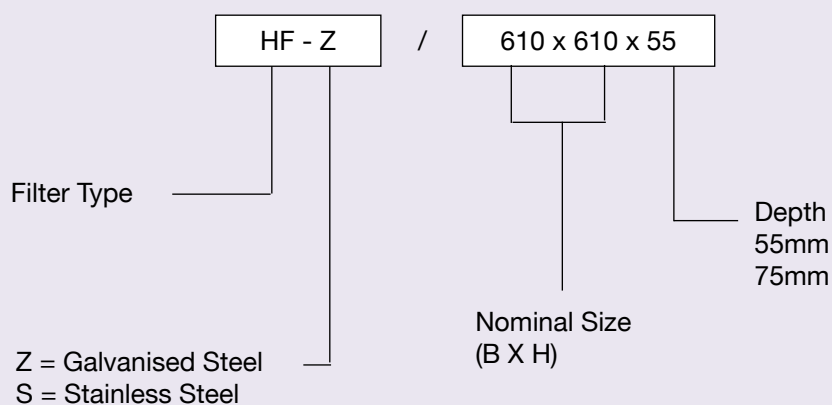

The TROX filter holding frame is a mounting frame for all types of primary and secondary filters, such as panel, pleated or pocket filters.

These frames are constructed from 1.2mm

galvanised sheet steel with four die-punched holes on each side to allow for easy installation. Stainless steel is also available on special request.

The holding frames also come complete with two filter holding clips and gasketing.
